

# deegree WPS

Processing of geodata using defined processes and OGC standards.

## Funktional Range

deegree Web Processing Service (WPS) processes geodata. The data that is made available to the service can be processed in totally different ways, examples are geometric operations or image processing. WPS defines the framework for implementing such processes lat/lon supports you with defining and implementing these processes.

## Technical Features

- + Framework for definition of specific processes
- + Support of OGC WPS Specification 0.4.0
- + XML-based configuration documents
- + Process logic to be implemented with Java
- + Supported operations: GetCapabilities, DescribeProcess and Execute

deegree WPS is like all deegree components Free Software / Open Source under LGPL (<http://www.deegree.org>)
